

6.3.1) Show

$$\mathbf{E} = E_{ox} \cos(k_z z - \omega t + \delta_x) \hat{x}$$

Satisfies

$$\nabla^2 \mathbf{E} = \frac{1}{c^2} \frac{\partial^2 \mathbf{E}}{\partial t^2}$$

and

$$\mathbf{B} = B_{ox} \cos(k_z z - \omega t + \delta'_x) + B_{oy} \cos(k_z z - \omega t + \delta'_y) \hat{y}$$

Satisfies

$$\nabla^2 \mathbf{B} = \frac{1}{c^2} \frac{\partial^2 \mathbf{B}}{\partial t^2}$$

Start with  $\mathbf{E}$

$$\nabla^2 \mathbf{E} = \frac{1}{c^2} \frac{\partial^2 \mathbf{E}}{\partial t^2}$$

$$\begin{aligned} \nabla^2 \mathbf{E} &= \nabla^2 E_x \hat{x} + \nabla^2 E_y \hat{y} + \nabla^2 E_z \hat{z} \\ &= \left( \frac{\partial^2}{\partial x^2} E_x + \frac{\partial^2}{\partial y^2} E_x + \frac{\partial^2}{\partial z^2} E_x \right) \hat{x} \end{aligned}$$

$$\nabla^2 \mathbf{E} = -k_z^2 E_{ox} \cos(k_z z - \omega t + \delta_x) \hat{x}$$

$$\frac{1}{c^2} \frac{\partial^2 \mathbf{E}}{\partial t^2} = \frac{1}{c^2} \frac{\partial^2}{\partial t^2} (E_{ox} \cos(k_z z - \omega t + \delta_x) \hat{x}) \frac{1}{c^2}$$

$$= -\frac{\omega^2}{c^2} E_{ox} \cos(k_z z - \omega t + \delta_x)$$

Matthew Jackson  
PHYS 513  
October 12, 2020  
HW #6

$$\nabla^2 \mathbf{E} = \frac{1}{c^2} \frac{\partial^2 \mathbf{E}}{\partial t^2}$$

$$-k_z^2 E_{ox} \cos(k_z z - \omega t + \delta_x) = -\frac{\omega^2}{c^2} E_{ox} \cos(k_z z - \omega t + \delta_x)$$

$$+ k_z^2 \cancel{\mathbf{E}} = + \frac{\omega^2}{c^2} \cancel{\mathbf{E}}$$

$$\sqrt{k_z^2 - \frac{\omega^2}{c^2}} \rightarrow k_z = \pm \frac{\omega}{c}$$

$\nabla^2 \mathbf{E} = \frac{1}{c^2} \frac{\partial^2 \mathbf{E}}{\partial t^2}$  is true when  $k_z$  is related to  $\omega$  by  $c$  such that  $|k_z c| = |\omega|$

$$\nabla^2 \mathbf{B} = \frac{1}{c^2} \frac{\partial^2 \mathbf{B}}{\partial t^2}$$

$$\begin{aligned} \nabla^2 \mathbf{B} &= \nabla^2 B_x \hat{x} + \nabla^2 B_y \hat{y} + \cancel{\nabla^2 B_z \hat{z}} \\ &= \left( \frac{\partial^2}{\partial x^2} B_x + \frac{\partial^2}{\partial y^2} B_x + \frac{\partial^2}{\partial z^2} B_x \right) \hat{x} + \\ &\quad \left( \frac{\partial^2}{\partial x^2} B_y + \frac{\partial^2}{\partial y^2} B_y + \frac{\partial^2}{\partial z^2} B_y \right) \hat{y} \\ &= \frac{\partial^2}{\partial z^2} B_x \hat{x} + \frac{\partial^2}{\partial z^2} B_y \hat{y} \\ &= \frac{\partial^2}{\partial z^2} B_{ox} \cos(k_z z - \omega t + \delta_x') \hat{x} + \end{aligned}$$

$$\frac{\partial^2}{\partial z^2} B_{oy} \cos(k_z z - \omega t + \delta_y') \hat{y}$$

$$\begin{aligned} \nabla^2 \mathbf{B} &= -k_z^2 \left( B_{ox} \cos(k_z z - \omega t + \delta_x') \hat{x} + \right. \\ &\quad \left. B_{oy} \cos(k_z z - \omega t + \delta_y') \hat{y} \right) \end{aligned}$$

$$\frac{1}{c^2} \frac{\partial^2 \mathbf{B}}{\partial t^2} = \frac{1}{c^2} \frac{\partial^2}{\partial t^2} \left( B_{ox} \cos(k_z z - \omega t + \delta_x') \hat{x} + B_{oy} \cos(k_z z - \omega t + \delta_y') \hat{y} \right)$$

$$= -\frac{\omega^2}{c^2} \left( B_{ox} \cos(k_z z - \omega t + \delta_x') \hat{x} + B_{oy} \cos(k_z z - \omega t + \delta_y') \hat{y} \right) \underbrace{\frac{-\omega^2}{c^2} \mathbf{B}}$$

$$\nabla^2 \mathbf{B} = \frac{1}{c^2} \frac{\partial^2 \mathbf{B}}{\partial t^2}$$

$$+ k_z^2 \mathbf{B} = + \frac{\omega^2}{c^2} \mathbf{B}$$

$$\boxed{k_z^2 = \frac{\omega^2}{c^2} \Rightarrow k_z = \pm \frac{\omega}{c}}$$

$\nabla^2 \mathbf{B} = \frac{1}{c^2} \frac{\partial^2 \mathbf{B}}{\partial t^2}$  is true when  $k_z$  is related to  $\omega$  by  $c$  such that  $|k_z c| = |\omega|$

6.3.2) Show that  $k_z, \omega, E_{ox}, B_{ox}, B_{oy}, \delta_x, \delta'_x$ , or  $\delta'_y$  must be related or 0 for  $B$  and  $E$  to be consistent with Maxwell's equations

Maxwell's Eq

$\rightarrow \sin \rightarrow \cos \rightarrow -\sin \rightarrow -\cos$

$$\nabla \cdot E = \rho/\epsilon_0 = 0 \quad (\rho=0)$$

$$\nabla \times E = - \frac{\partial B}{\partial t}$$

$$\nabla \cdot B = 0$$

$$\nabla \times B = \mu_0 J + \mu_0 \epsilon_0 \frac{\partial E}{\partial t} = \mu_0 \epsilon_0 \frac{\partial E}{\partial t} \quad (\because J=0)$$

$$E = E_{ox} \cos(k_z z - \omega t + \delta_x) \hat{x}$$

$$B = B_{ox} \cos(k_z z - \omega t + \delta'_x) \hat{x} + B_{oy} \cos(k_z z - \omega t + \delta'_y) \hat{y}$$

$$\nabla \times E = \begin{vmatrix} \hat{x} & \hat{y} & \hat{z} & \partial_t \\ \partial_x & \partial_y & \partial_z & 0 \\ E_x & 0 & 0 & (0 - \frac{\partial B_x}{\partial t}) \hat{z} \end{vmatrix} = (\partial_z E_x - 0) \hat{y}$$

$$\nabla \times E = -k_z E_{ox} \sin(k_z z - \omega t + \delta_x) \hat{y}$$

$$\frac{\partial B}{\partial t} = +\omega (+B_{ox} \sin(k_z z - \omega t + \delta'_x) \hat{x} + B_{oy} \sin(k_z z - \omega t + \delta'_y) \hat{y})$$

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

$$-k_z E_{ox} \sin(k_z z - \omega t + \delta_x) \hat{y} = -(\omega B_{ox} \sin(k_z z - \omega t + \delta'_x) \hat{x} \\ B_{oy} \sin(k_z z - \omega t + \delta'_y) \hat{y})$$

$- \omega B_{ox} \sin(k_z z - \omega t + \delta'_x) \hat{x}$  must equal 0  
 $B_{ox} = 0$  achieves this

$$+ k_z E_{ox} \sin(k_z z - \omega t + \delta_x) \hat{y} = + \omega B_{oy} \sin(k_z z - \omega t + \delta'_y) \hat{y}$$

$$\phi = k_z z - \omega t$$

$$k_z E_{ox} \sin(\phi + \delta_x) = \omega B_{oy} \sin(\phi + \delta'_y)$$

$$k_z E_{ox} (\sin(\phi) \cos(\delta_x) + \cos(\phi) \sin(\delta_x)) = \Rightarrow \\ \omega B_{oy} (\sin(\phi) \cos(\delta'_y) + \cos(\phi) \sin(\delta'_y))$$

IF  $\delta_x = \delta'_y$ , then  $k_z E_{ox} = \omega B_{oy}$  or

$$\frac{E_{ox}}{B_{oy}} = \frac{\omega}{k_z}$$

$$\nabla \times \mathbf{B} = \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t}$$

$$\begin{matrix} \nabla \times \mathbf{B} = & \hat{x} & \hat{y} & \hat{z} \\ & \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ \mathbf{B}_x & B_y & 0 \end{matrix} = \begin{matrix} (0 - \partial_z B_y) \hat{x} \\ (\partial_x B_z - 0) \hat{y} \\ (\partial_y B_x - \partial_x B_y) \hat{z} \end{matrix}$$

$$\nabla \times \mathbf{B} = +k_z (+B_{0y} \sin(k_z z - \omega t + \delta_y') \hat{x}) + \\ k_z (-B_{0x} \sin(k_z z - \omega t + \delta_x') \hat{y})$$

$$\frac{\partial \mathbf{E}}{\partial t} = +\omega (+E_{0x} \sin(k_z z - \omega t + \delta_x') \hat{x})$$

$$\nabla \times \mathbf{B} = \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t}$$

$$k_z B_{0y} \sin(k_z z - \omega t + \delta_y') \hat{x} - B_{0x} \overset{\text{must be } 0}{\leftarrow} \sin(k_z z - \omega t + \delta_x') \hat{y} = \\ \mu_0 \epsilon_0 \omega E_{0x} \sin(k_z z - \omega t + \delta_x') \hat{x}$$

If  $B_{0x} = 0$ , all components work out

$$k_z B_{0y} \sin(k_z z - \omega t + \delta_y') \hat{x} = \mu_0 \epsilon_0 \omega E_{0x} \sin(k_z z - \omega t + \delta_x') \hat{x}$$

If  $\delta_y' = \delta_x$ , then  $k_z B_{0y} = \mu_0 \epsilon_0 \omega E_{0x}$ . Using  
 $\frac{E_{0x}}{B_{0y}} = \frac{\omega}{k_z}$  then  $k_z = \mu_0 \epsilon_0 \omega (\omega/k_z)$

$$\text{Thus } \left(\frac{\omega}{k_z}\right)^2 = \frac{1}{\mu_0 \epsilon_0}$$

Thus  $B_{ox} = 0$

$$\frac{B_{ox}}{B_{oy}} = \frac{\omega}{k_z}, \quad \left(\frac{\omega}{k_z}\right)^2 = \frac{1}{\mu_0 \epsilon_0} \quad \text{when } \delta_x = \delta_y$$

Use this to see if other solutions to  $\delta_x$  and  $\delta_y$

Resume from Ampere's law  $\oint = k_z z - \omega t$

$$k_z B_{oy} (\sin \phi \cos \delta_y + \cos \phi \sin \delta_y) = \mu_0 \epsilon_0 \omega B_{ox} (\sin \phi \cos \delta_x + \cos \phi \sin \delta_x)$$

$$(\sin \phi \cos \delta_y + \cos \phi \sin \delta_y) = \mu_0 \epsilon_0 \frac{\omega}{k_z} \frac{B_{ox}}{B_{oy}} (\sin \phi \cos \delta_x + \cos \phi \sin \delta_x)$$

$$(\sin \phi \cos \delta_y + \cos \phi \sin \delta_y) = (\sin \phi \cos \delta_x + \cos \phi \sin \delta_x)$$

Pick  $k$  an offset such that  $\delta_y = n\pi + \delta_x$

$$\sin \phi \cos(n\pi + \delta_x) + \cos \phi \sin(n\pi + \delta_x) = \sin \phi \cos \delta_x + \cos \phi \sin \delta_x$$

$$\sin \phi (\cos n\pi \cos \delta_x - \sin n\pi \sin \delta_x) + \cos \phi (\sin n\pi \cos \delta_x + \cos n\pi \sin \delta_x) =$$

$$\pm (\sin \phi \cos \delta_x + \cos \phi \sin \delta_x) = \sin \phi \cos \delta_x + \cos \phi \sin \delta_x$$

This sign flip would imply that  $B_{oy}/B_{oy} = \pm \frac{\omega}{k_z}$   
 Which can not be true. Therefore  $n$   
 must be an even integer.

Thus  $\frac{1}{\sqrt{\mu_0 \epsilon_0}} = \left( \frac{\omega}{k_z} \right) = \frac{B_{ox}}{B_{oy}}$ ,  $B_{ox} = 0$ , and

$$\delta_x = \delta_y + n\pi \text{ when } n \text{ is an even integer}$$

6.3.3) If  $\mathbf{E} = E_{oy} \cos(k_z z - \omega t + \delta_y) \hat{y}$

Faraday's law ( $I$  think this is for  $\mathbf{g}$ )

$$\nabla \times \mathbf{E} = \begin{vmatrix} \hat{x} & \hat{y} & \hat{z} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ 0 & E_{oy} & 0 \end{vmatrix} = \frac{\partial}{\partial z} E_{oy} \hat{x}$$

$$\nabla \times \mathbf{E} = -k_z (-E_{oy} \sin(k_z z - \omega t + \delta_y)) \hat{x}$$

use  $\frac{d\mathbf{B}}{dt}$  from 6.3.2  $\phi = k_z z - \omega t$

$$+ k_z (+E_{oy} \sin(\phi + \delta_y)) \hat{x} = -\omega (B_{ox} \sin(\phi + \delta_x) \hat{x} + B_{oy} \sin(\phi + \delta_y) \hat{y})$$

$B_{oy} = 0$  to cancel  $\hat{y}$  component

$$k_z E_{oy} \sin(\phi + \delta_y) \hat{x} = -\omega B_{ox} \sin(\phi + \delta_x) \hat{x}$$

Assume trivial solution  $\delta_y = \delta_x$

$$k_z E_{oy} = -\omega B_{ox}$$

$$\frac{E_{oy}}{B_{ox}} = -\frac{\omega}{k_z}$$

## Ampere's law

$$\frac{\partial \mathbf{E}}{\partial t} = +\omega (+B_{0y} \sin(k_z z - \omega t + \delta_y) \hat{y})$$

use  $\nabla \times \mathbf{B}$  from 6.3.2

$$k_z B_{0y} \sin(k_z z - \omega t + \delta_y) \hat{x} - k_z B_{0x} \sin(k_z z - \omega t + \delta_x') \hat{y} = \mu_0 \epsilon_0 \omega E_{0y} \sin(k_z z - \omega t + \delta_y) \hat{y}$$

$$B_{0y} = 0$$

$$-k_z B_{0x} \sin(k_z z - \omega t + \delta_x') = \mu_0 \epsilon_0 \omega E_{0y} \sin(k_z z - \omega t + \delta_y)$$

if  $\delta_x' = \delta_y$

$$-k_z B_{0x} = \mu_0 \epsilon_0 \omega E_{0y}$$

$$I = \mu_0 \left( -\frac{\omega}{k_z} \right) \frac{E_{0y}}{B_{0x}} < \left( \frac{\omega}{k_z} \right)$$

$$\frac{\omega}{k_z} = \frac{\pm 1}{\mu_0 \epsilon_0}$$

From 6.3.2  $\delta_y = \delta_x' + n\pi$

thus  $\frac{E_{0y}}{B_{0x}} = -\frac{\omega}{k}, \frac{\omega}{k} = \frac{\pm 1}{\sqrt{\mu_0 \epsilon_0}}, B_{0y} = 0$

$$6.3.4) \text{ Using } \mathbf{k} = k_x \hat{x} + k_y \hat{y} + k_z \hat{z}$$

Show that 2 and 3 are consistent with

$$\mathbf{B} = \frac{1}{c} \mathbf{k} \times \mathbf{E}$$

from 6.3.2

$$\frac{E_{ox}}{B_{oy}} = \frac{\omega}{k_z}$$

from 6.3.3

$$\frac{E_{oy}}{B_{ox}} = -\frac{\omega}{k_z}$$

using  $\mathbf{k} = k_z \hat{z}$  and  $\omega/k = c$

$$6.3.2 \rightarrow B_{y\hat{y}} = \frac{1}{c} \hat{k} \times E_x \hat{x}$$

$$= \frac{k}{\omega} \hat{z} \times E_x \hat{x}$$

$$= \frac{E_x k}{\omega} (\hat{z} \times \hat{x})$$

$$\begin{matrix} \hat{x} & \hat{y} & \hat{z} \\ 0 & 0 & 1 \\ 1 & 0 & 0 \end{matrix} = \begin{matrix} 0\hat{x} \\ 1\hat{y} \\ 0\hat{z} \end{matrix}$$

$$B_{y\hat{y}} = \frac{E_x k}{\omega} \hat{y} \checkmark$$

From

6.3.3

$$\frac{E_{oy}}{B_{ox}} = -\frac{\omega}{K_z}$$

$$B_x \hat{x} = -\frac{k_z}{\omega} E_y \hat{y} = \frac{1}{c} \hat{k} \times E_y \hat{y}$$

$$\begin{matrix} \hat{x} & \hat{y} & \hat{z} \\ 0 & 0 & 1 \\ 0 & -1 & 0 \end{matrix}$$

$$B_x \hat{x} = \frac{E_y k}{\omega} \hat{z} \times \hat{y}$$

$$\begin{matrix} 0 & -1 & \hat{x} \\ 0 & \hat{y} & \\ 0 & \hat{z} & \end{matrix} \leftarrow$$

$$B_x \hat{x} = -\frac{E_y k}{\omega} \hat{x}$$
